Professional Summary

Lead Site Reliability Engineer (SRE) and DevOps Engineer with 6+ years building CI/CD, automation, observability, and reliability tooling for enterprise platforms at Keysight and Intel. Currently leading a large-scale DevSecOps modernization of Jenkins pipelines for EU Cyber Resilience Act (CRA) compliance. Builds AI-powered tooling (RAG assistants, MCP servers, LLM agents) while deepening cloud/IaC skills through hands-on AWS, Terraform, and Kubernetes personal projects.

Skills

Programming & OS: Python (Advanced), Bash/Shell, SQL, TypeScript, Linux (Ubuntu/RHEL/Alpine), Windows.

CI/CD & DevSecOps: Jenkins/CloudBees CI (Jenkinsfile, Shared Libraries), GitHub Actions, JFrog Artifactory & CLI v2 (build-info), Bitbucket, GitHub Enterprise, Git, Git LFS, supply-chain security, Wiz, Semgrep, Dependabot.

Cloud & IaC: Azure (Entra ID, Functions); personal projects: AWS (ECS Fargate, ECR, EFS), Terraform, Kubernetes, Docker.

AI & LLMs: RAG, MCP Servers, LLM Agents, Prompt Engineering, AI coding agents (GitHub Copilot, Claude Code, Cursor).

Observability & SRE: Elasticsearch/ELK, Kibana, Prometheus, Grafana, RCA, runbooks, toil automation.

APIs & Data: FastAPI, Flask, Node.js, RESTful APIs, PostgreSQL, MySQL, SQLite, Teradata.

Languages: Spanish (Native), English (Advanced).

Work Experience

Lead Site Reliability Engineer (SRE)

Jul 2026 - Present

Keysight Technologies (via Insight Global)

Remote, Costa Rica

- Lead a distributed SRE/DevOps team (India, Brazil) in a **DevSecOps** program modernizing **1,000+ Jenkins/CloudBees CI pipelines** for **EU Cyber Resilience Act (CRA)** compliance with the latest **Jenkins Shared Library**, **JFrog CLI v2**, and **build-info** provenance in **JFrog Artifactory**.
- Built automation with **GitHub Copilot** on the **Jira/Confluence Cloud, Jenkins, and Bitbucket REST APIs** that replaced a manual spreadsheet with a live Confluence dashboard (throughput, cycle time, forecast) and Jira-vs-pipeline drift checks.
- Standardized the team on **GitHub Copilot** after evaluating Claude Code, to reduce AI licensing costs; use it daily with **MCP** integrations (Jira, Confluence, Bitbucket) and **LLM-based PR review**.

DevOps Engineer

Mar 2026 - Jul 2026

Intel Corporation (via Net2Source)

Heredia, Costa Rica

- Automated cleanup for Intel's multi-site **JFrog Artifactory** in **Python** (REST API, **PostgreSQL**), decommissioning unused repositories and clearing empty folders from a federated repository, and drove **storage governance** with repository owners.
- Designed a **RAG**-based support assistant on Intel's internal GenAI platform (**Claude Sonnet**, **pgvector**) grounded in the team's Confluence knowledge base, with cited sources and guardrails, to help L2 resolve tickets without escalating to L3.
- Built an **ELK/Elasticsearch MCP server** so AI agents can query Artifactory logs and metrics in natural language, and designed a read-only **proactive monitoring** agent with prompt guardrails.
- Built the team's **vulnerability remediation** plan for **Wiz**, **Semgrep**, **Dependabot**, and **Entra ID** findings prioritized by severity and **SLA**, shipping upgrades that closed critical and high **CVEs** in an **Azure Functions** service; developed a **pytest**-covered, dry-run-by-default tool migrating Artifactory groups to **LDAP**-backed **IAM** entitlements.

Software Development Engineer in Test

Jan 2020 - Jun 2025

Intel Corporation

Heredia, Costa Rica

- Owned the team's **CI/CD infrastructure**: automated unit/integration testing, static analysis, code-standard checks, and automated code-review suggestions, becoming the cross-product reference other CI/CD owners replicated.
- Created a **Python/Bash automation toolkit** (SOLID/OOP) adopted by validation teams across countries, including one-command **platform-boot automation** that replaced manual EFI/OS steps and became the cross-team standard.
- Served as **Product Owner and Technical Lead** (Scrum) for a 6-engineer team on a next-gen Xeon product, delivering every milestone on schedule despite repeated pull-ins; led a programming **upskilling program** and mentored engineers.
- Built a product-agnostic **Python + SQL (Teradata)** data standard to extract and visualize large operational data volumes for **Product Health Indicators**, cutting retest and test time; adopted by engineering and operations.

Personal Projects

TicoRates — Public Exchange Rate API & MCP Server for Costa Rica

github.com/jonach1998/ticorates

- Built an open-source **FastAPI** REST API for official Costa Rican exchange rates from the Central Bank (BCCR), with SQLite caching and request deduplication, plus an **MCP server on PyPI** for AI assistants (Claude, Cursor).
- Automated **multi-arch Docker builds** and **GitHub Actions CI/CD** to Docker Hub and PyPI; self-hosted on a Raspberry Pi and live at ticorates.dev/docs.

JobHound — AI-Powered Job Hunting Automation

github.com/jonach1998/jobhound

- Deployed on **AWS** with **Terraform**: scheduled **ECS Fargate** tasks, **ECR**, **EFS**, least-privilege **IAM**, and GitHub Actions CI/CD.
- Built an open-source Python tool that collects jobs from LinkedIn, Indeed, and Computrabajo, scores them with any OpenAI-compatible **LLM**, and sends top matches via Telegram; profiles are auto-discovered at runtime.

Education

Technical Program in AI & Machine Learning, Universidad CENFOTEC

Jun 2026 - Present

Bachelor's Degree in Computer Systems Engineering, Fidelitas University

Jan 2020 - Present

Bachelor's Degree in Electronic Engineering, Latin University of Costa Rica

Jan 2016 - Dec 2019
